Frequently Asked Questions, Troubleshooting Guides, and Self-Service Instructions

IT Department

Last Updated: March 2026 | Contact: #it-helpdesk on Slack | it-support@techviet.vn

1. Account & Access Management

1.1 How do I reset my password?

Navigate to <https://sso.techviet.vn/reset> and enter your company email address (firstname.lastname@techviet.vn). A password reset link will be sent within 5 minutes. Check your spam/junk folder if not received. The link expires after 1 hour. Your new password must meet all security requirements (see table below). If you're completely locked out and cannot access email, contact IT Help Desk directly — you'll need to verify your identity with your employee ID number and date of birth.

Requirement	Details	Common Mistakes to Avoid
Minimum Length	14 characters	Using common patterns like 'Password123!' — blocked by our dictionary checker
Character Types	Must include all 4: uppercase, lowercase, number, special character	Putting the special char at the end only — distribute throughout for better security
Cannot Reuse	Last 12 passwords are remembered	Incrementing numbers (Password1!, Password2!) — our system detects sequential patterns
Rotation	Must change every 90 days	You'll get reminders at 14, 7, and 1 day(s) before expiry via email and Slack
Banned Words	Your name, email prefix, 'techviet', 'password', '123456' and 10,000+ common passwords	Any variation of these words is blocked, including leetspeak (p@ssw0rd)

1.2 Setting Up Multi-Factor Authentication (MFA)

MFA is mandatory for all TechViet accounts. You'll be prompted to set up MFA during your first login. We support two methods — hardware security keys are strongly preferred for their phishing resistance. SMS-based MFA is NOT supported due to SIM-swapping risks.

Method	Setup Steps	Best For	Recovery if Lost
YubiKey (Hardware Key)	1. Insert YubiKey into USB port. 2. When prompted during login, tap the gold sensor. 3. Key is automatically registered. You receive 2 keys — keep the backup in a safe place.	All employees (most secure). Required for: AWS access, production systems, admin roles.	Use backup YubiKey. If both lost: contact IT with employee ID for emergency reset (identity verification required in person).
Authenticator App (TOTP)	1. Download Google Authenticator or Authy on your phone. 2. Scan QR code displayed during MFA setup. 3. Enter the 6-digit code to verify. 4. Save the recovery codes in your password manager.	Remote workers, mobile-first users. Acceptable for: standard systems, email, Slack.	Use recovery codes (saved during setup). If codes lost: IT can reset MFA with manager approval + identity verification.

1.3 Account Lockout and Recovery

Your account is locked after 5 consecutive failed login attempts. This is a security measure to prevent brute-force attacks. Accounts auto-unlock after 30 minutes. If you cannot wait, or if you suspect your account was compromised (you didn't cause the lockout), follow these steps:

Situation	Action	Contact
Normal lockout (you entered wrong password)	Wait 30 minutes for auto-unlock, then reset your password at sso.techviet.vn/reset	Self-service
Urgent: need access immediately	Contact IT Help Desk on Slack (#it-helpdesk) or call ext. 100. Verify with employee ID.	#it-helpdesk
Suspected compromise (you didn't cause the lockout)	Immediately report to Security Team. Do NOT attempt to log in. They will investigate and secure your account.	#security-incidents or soc@techviet.vn
Lockout during off-hours (after 6 PM / weekends)	Email it-support@techviet.vn with subject 'URGENT: Account Lockout'. On-call IT responds within 1 hour.	it-support@techviet.vn

2. VPN & Remote Access

2.1 Connecting to the Company VPN

VPN connection is required to access internal systems when working remotely. TechViet uses WireGuard VPN for its superior performance and security compared to traditional VPN solutions. Split tunneling is disabled — all traffic routes through the VPN when connected.

Step	Action	Notes / Troubleshooting
1	Install WireGuard client from TechViet Software Center (pre-installed on company laptops). For personal devices: download from wireguard.com .	macOS: also available via App Store. Windows: requires admin rights for first install.
2	Go to https://vpn.techviet.vn and log in with your SSO credentials + MFA.	This site is accessible WITHOUT VPN (public-facing). Bookmark it.
3	Download your personal VPN configuration file (.conf). This is unique to you — do not share it.	File is regenerated every 90 days. You'll get a Slack reminder before expiry.
4	In WireGuard app: click 'Import tunnel(s) from file' and select the downloaded .conf file.	On macOS, you may need to drag the file into the WireGuard app window.
5	Click 'Activate' to connect. A green indicator means you're connected.	First connection may take 5-10 seconds. Subsequent connections are near-instant.
6	Verify by navigating to an internal site (e.g., jira.techviet.vn). If it loads, you're connected.	If it doesn't load, see troubleshooting table below.

2.2 VPN Troubleshooting

Symptom	Likely Cause	Solution
VPN connects but internal sites don't load	DNS resolution issue. Your system may be using a public DNS server instead of the corporate one.	Flush DNS: macOS: 'sudo dscacheutil -flushcache && sudo killall -HUP mDNSResponder'. Windows: 'ipconfig /flushdns'. Then reconnect VPN.
VPN frequently disconnects (every few minutes)	Unstable internet connection or firewall blocking WireGuard UDP traffic (port 51820).	Try wired connection. If on hotel/airport Wi-Fi, their firewall may block UDP. Solution: use the TCP fallback endpoint (see vpn.techviet.vn/tcp-fallback).
Very slow speeds through VPN	Connected to a distant VPN server or ISP throttling.	Change server: HCM office users → sgn.vpn.techviet.vn . Hanoi → han.vpn.techviet.vn . International → sgp.vpn.techviet.vn (Singapore).

Symptom	Likely Cause	Solution
'Handshake timeout' error	Config file expired (older than 90 days) or clock skew on your device.	Download fresh config from vpn.techviet.vn. Also verify your system clock is accurate (Settings > Date & Time > auto-set).
Cannot access specific service (e.g., AWS console) but VPN otherwise works	You may not have the required access group for that service.	Submit an access request via IT ticket. Include: service name, business justification, and manager approval.

3. Software & Development Environment

3.1 Pre-installed Development Tools

Category	macOS (MacBook Pro)	Windows (Dell XPS/Precision)	Notes
IDE / Editor	VS Code 1.87+, IntelliJ IDEA Ultimate 2024.1	VS Code 1.87+, IntelliJ IDEA Ultimate 2024.1	JetBrains license managed via company account
Terminal	iTerm2, Oh My Zsh (preconfigured)	Windows Terminal, Git Bash	zsh is default shell on macOS
Containers	Docker Desktop (4 CPU, 8GB RAM default), kubectl, Helm	Docker Desktop (WSL2 backend), kubectl, Helm	Request more Docker resources via IT if needed
Version Control	Git 2.43+, GitHub CLI (gh), Git LFS	Git 2.43+, GitHub CLI (gh), Git LFS	Pre-configured with company SSH keys
Languages	Python 3.12 (pyenv), Node.js 20 (nvm), Go 1.22 (goenv)	Python 3.12 (pyenv-win), Node.js 20 (nvm-windows), Go 1.22	Use version managers; don't install globally
Database Tools	DBeaver Community, pgcli, mongosh	DBeaver Community, pgcli, mongosh	For prod DB access: see Access Control policy
API Testing	Postman, httpie, curl	Postman, httpie, curl	Postman collections in team shared workspace
Security	CrowdStrike Falcon, 1Password Teams	CrowdStrike Falcon, 1Password Teams, BitLocker	Do NOT uninstall CrowdStrike — instant compliance violation

3.2 Requesting Additional Software

Submit requests via the TechViet Software Portal (software.techviet.vn). Software on the approved list is auto-installed within 1 business day. Software NOT on the approved list requires a security review (3-5 business days) by IT Security before installation. Open-source tools with active maintenance and no known CVEs are generally approved within 2 business days.

4. Hardware Support

4.1 Laptop Performance Issues

Step	Action	Expected Impact	Difficulty
1	Restart your laptop fully (Shut Down, not just close lid / Sleep). Many issues are caused by months of uptime.	Fixes 50%+ of performance issues. Clears RAM, resets file handles, applies pending updates.	Easy

Step	Action	Expected Impact	Difficulty
2	Close unnecessary browser tabs. Chrome uses 100-300MB per tab. Close tabs with video or complex web apps first.	Can free 2-6 GB RAM. Use OneTab extension to save tabs without keeping them open.	Easy
3	Check for and install pending OS updates (macOS: System Settings > Software Update; Windows: Settings > Windows Update).	Security patches + performance fixes. Some updates require restart.	Easy
4	Quit Docker Desktop if not actively using containers. Docker reserves 4-8 GB RAM by default even when idle.	Frees 4-8 GB RAM immediately. Restart Docker when you need it.	Easy
5	Check Activity Monitor (macOS) / Task Manager (Windows) for unexpected high-CPU processes. Screenshot and submit IT ticket if unfamiliar.	Identifies rogue processes. CrowdStrike scan can temporarily spike CPU — this is normal.	Medium
6	Run disk cleanup. macOS: Apple menu > About > Storage > Manage. Windows: Disk Cleanup utility. Clear caches, old downloads.	Frees disk space. Low disk space (<10% free) significantly degrades performance.	Medium
7	If still slow after above steps, submit IT ticket. Include: laptop model, macOS/Windows version, and Activity Monitor screenshot.	IT will run hardware diagnostics: SSD health, RAM test, battery check. May replace components.	IT Support

4.2 Laptop Replacement Program

Model	Configuration	Typical Role / Use Case	Approval Level
MacBook Pro 14" M3 Pro	18GB RAM, 512GB SSD, 14" Liquid Retina XDR	Frontend engineers, backend engineers, designers, PMs, business roles	Standard (auto-approved at 3-year cycle)
MacBook Pro 16" M3 Max	36GB RAM, 1TB SSD, 16" Liquid Retina XDR	ML engineers, senior engineers, DevOps, architects, anyone running local LLMs/training	Manager approval + IT confirmation
Dell XPS 15 9530	32GB RAM, 1TB SSD, i9-13900H, 15.6" OLED	Engineers on Windows-required projects (e.g., .NET, specific client tools)	Standard
Dell Precision 5690	64GB RAM, 2TB SSD, i9-14900HX, RTX 4000 Ada	ML engineers doing local model training, heavy data processing, GPU-required workloads	VP approval + IT confirmation

5. Contact Information

Channel	Contact Details	Best For	Response Time
Slack (preferred)	#it-helpdesk channel	General IT questions, quick issues, software requests	< 30 minutes during business hours
Email	it-support@techviet.vn	Detailed issues, attachment-heavy requests, after-hours	< 2 hours (business hours); < 4 hours (after hours)
Phone	+84 28 3823 XXXX ext. 100	Urgent issues only (locked out before important meeting, laptop dead)	Immediate during business hours
Walk-in	IT Help Desk, 2nd Floor, HCM Office	Hardware issues, peripheral setup, in-person troubleshooting	First-come, first-served (15-30 min wait typical)
Self-Service Portal	support.techviet.vn	Track ticket status, browse knowledge base, submit requests 24/7	Immediate (auto-responses); tickets triaged next business day
